Comments:

Before ANY new development takes place there should be more of a contribution of money by a developer to assist in obtaining water.

New housing + commercial develop. ments should pay more of the cost of future water costs.

Comments:

IF the Number of LAWNs in urban areas could be reduced by planting native plants instead it should save a lot of water. I know someone who has mostly native plants and they hardly water at all. Native plants are used to this climate. Get rid of front lawns especially

Comments:

In the parking lots — solid pavement should be replaced by pavement that allows the water to soak down at the site rather than being rushed to the gutter overloading the wastewater system thus causing pollution in nearby water sources. Quality of water is important — protect it — prevent problem.

Comments:

We need to stop urban sprawl into our foothills - this causes more roads, more pollution from septic tanks, etc.. We need to protect our water supply. It is important to protect our quality of water.
